

# Two cameras are required for the BOB Exams.

## Connection methods:

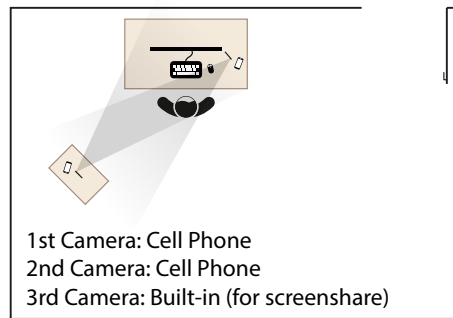

a. Scan the QR code to use your mobile phone as the primary camera and your device's camera as the secondary camera.

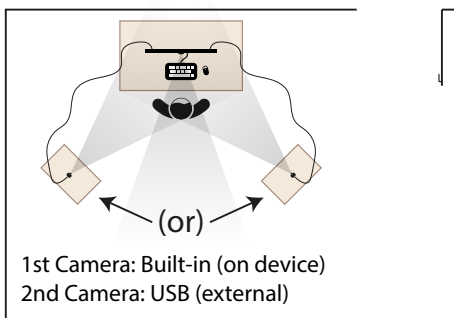

b. Use two mobile phones by scanning the QR code for both devices. This feature is intended for users whose camera function works properly, but whose device camera is physically damaged (e.g., broken, cracked, or scratched).

(or)

c. Use your computer's built-in camera as the primary camera and a wired external camera as the secondary camera.

Please ensure that the camera angles meet the following requirements:

**For the built-in camera of your computer (if applicable):**

Your face, shoulders, and upper body must be clearly visible at all times.

**For the second camera:**

The computer screen, desk, keyboard, your head, and the upper part of your body must be clearly visible.

As camera activation and screen sharing are not supported on mobile phones or tablets, these devices cannot be used to take the exam.
